Logistics Operations Performance Dashboard

Project Information

Prepared By: Ijeoma Lorretta, Anya

Tool: Microsoft Excel (Power Query, Power Pivot, DAX, Pivot Tables)

Analysis Period: January 2022 – December 2024

Business Background

The logistics department generates large volumes of operational data daily. This project consolidates operational data into an interactive dashboard for executive decision-making.

Business Objective

Monitor fleet performance, operational efficiency, financial performance, customer service, and support data-driven decisions.

Business Problems

Revenue vs operating costs; fleet utilization; downtime; on-time delivery; customer demand; facility workload; maintenance spending; safety incidents; truck performance.

Stakeholders

COO, Operations Manager, Fleet Manager, Logistics Manager, Maintenance Manager, Safety Manager, Business Analyst.

Functional Requirements

KPIs: Trips, Revenue, Operating Cost, Fleet Utilization, Fuel Efficiency, On-Time Delivery.

Filters: Year, Month, Truck ID.

Charts: Revenue vs Cost, Trips vs Downtime, Maintenance by Type, Incidents by City & Severity, Customers by Deliveries, Facilities by Loads.

Reports: Truck performance table.

Data Sources

Trips, Loads, Deliveries, Fleet Utilization, Fuel Purchases, Maintenance Records, Incident Records, Trucks, Customers, Facilities, Calendar.

Data Quality Assessment

Approximately 2% missing Truck, Driver and Trailer IDs, randomly distributed. One blank Truck ID excluded. 120 trucks registered, 92 operational, 28 inactive but with maintenance costs. All trips marked Completed.

Expected Business Value

Improve monitoring, maintenance planning, delivery performance, risk identification, and executive decision-making.

Limitations

Synthetic dataset, low metric variation, maintenance table not transactionally linked to operational fact table.
